

ServiceMASTER Clean

As part-time worship pastor at my church, I understand both the eagerness and the concerns involved with re-opening your sanctuary doors to the public. Our people want to be together and receive encouragement and strength from church leadership. Then we ask questions like, what cleaning agent do we use? Can volunteers effectively get the job done? What are the legal liabilities if someone gets sick after attending?

For churches and businesses alike, ServiceMaster highly recommends electrostatic fogging as a way to disinfect your sanctuary and other areas of your facility you may be looking to re-open. The positive charge of the electrostatic fog causes the cleaning agent to cling to any surface it comes into contact with, which allows the sanitizer and mold preventatives to wrap around and evenly coat all types of surfaces for a complete clean.

Here are some benefits of electrostatic fogging:

- Reduces the time it takes to disinfect all surfaces by 50% compared to conventional methods
- Covers and clings to all surfaces and hard-to-reach areas
- Applies chemicals efficiently and effectively without overuse
- Eliminates the dangers of volunteers using chemical cleaners
- Safe for use around electronics and A/V equipment
- Reduces risk of liability
- Provides reassurance for your congregation and visitors

If you would like more information about this simple and effective cleaning process, **please contact our offices at 1-877-356-6397.**

Also, we would appreciate if this information could be made available to the congregations you serve either through email or resource lists on websites or facebook.

Thank you and God bless!
